

The SESTA multilayer is designed to resist a pressure of 10 bar at a temperature of 70/95°C for 50 years. this property is ensured by long-term tests that allow the so-called regression lines to be drawn.

The SESTA SRL company also adheres to the law on civil product liability, i.e. the legal liability of a producer or seller towards a consumer or end user for damages caused by the product they put into circulation.

In general, a manufacturer or seller can be held liable for damage caused by a defective product if the following elements can be proven: Product defect and Cause of the damage. Furthermore, a causal link must be demonstrated between the product defect and the damage suffered by the person bringing the lawsuit.

There is therefore a complaint process that must be respected in order to arrive at an optimal solution that protects the seller and buyer.

The certifications that SESTA has certify that the product has been manufactured according to specific quality standards. This may include compliance with recognized industry norms or industry standards. indicate that the product is safe for its intended use and that it meets certain safety requirements established by appropriate organizations.

SESTA presents a vast range of products ranging from the plastic piping sector: with and without aluminum to the fittings sector, each product is certified and guaranteed for 50 years.

The certifications that SESTA has concern the quality, manufacturing safety and drinkability of its products.

The company is periodically subjected to checks by certifying bodies which certify its quality and continuous adherence to evaluation standards, in order to have an excellent performing product and above all safe from all points of view.

SESTA also produces tubes without aluminium, with oxygen barrier, EVOH 3/5 layers, these latter also IIP certified as regards quality and production with positive results also for drinkability, where SESTA has faced several test reports with positive results, HY (hygiene Institut) and CSI certified.

The height of the SESTA platforms relating to all types of products, therefore both for bare multilayer pipe in rolls and for coated multilayer pipe in rolls for water and gas, does not exceed 230 cm in height.

the quantity in meters of the pallets of the individual products varies depending on the diameter chosen and depending on the length of the roll to which reference is made (quantities which can be seen within the product sheet to which it refers).

The platform that SESTA SRL uses for the creation of its pallets has a size of 80x80 cm for most of the diameters used, with the exception of diameters equal to or greater than 32mm as regards bare tubes, whose reference pallets have a size of 100x100 cm and the coated pipes with a diameter equal to or greater than 26 mm whose reference pallets also have dimensions equal to 100x100 cm.
